

OSCAR

The Water-Rescue Training Dummy

\$699.00 plus shipping and handling

Weights 180 pounds wet. 35 pounds dry!

“Oscar” is Man-Overboard dummy used for training water rescue personnel.

It floats at chest level like a human, and at 180 pounds it provides a very realistic human size and weight for the recovery of a victim out of the water into a rescue craft.

It is manufactured from extremely tough vinyl impact bladders with stainless steel joints, so it can withstand repetitive drops overboard from any realistic height.

Before use, the bladders are filled with fresh or salt water from a deck hose. After training use, the bladders can be drained for transport and stowage. A galvanized shackle allows lifting from the shoulder.

Specifications:

Height: 6 feet.

Weight: 35 pounds dry /180 pounds wet.

Materials: Heavy duty vinyl body parts, PVC fill/drain fittings, Stainless steel joints, galvanized lifting shackles.

Part Number: OT100
